

MINI-MINI TOPICS - QUICK QUESTIONS AND ANSWERS (YAZHI AND ATHENA SWARUU)

Published 18 November 2024 by Cosmic Agency, Gosia

ARC OF COVENANT

Gosia: Where is the Ark of the Covenant now? And the museum?

Yazhi: There are three. First: It is in Area S-4 in the warehouse, in Nevada. Second: It is in the top secret underground levels of the Russian Vostok base in Antarctica. Third: Here in the Sadicleya, in the museum, next to an Egyptian ship on one side and Niki Lauda's 1977 Ferrari F1 on the other. They are needed here. Not in Taygeta.

MICROSCOPES

Robert: Are they different than human ones?

Yazhi: Yes, very different. They work with molecular mapping by frequencies. Same principle as the scanners that read the objects to feed a computer to replicate them.

MINING NEUTRON STARS

Robert: Someone asked me if neutron stars are mined as a source of energy. Has that been done? He says there were some ETs who helped the SSP with that. Is that true?

Swaruu X (Athena): No, that is not true. It is not necessary to mine for energy if you have Zero Point. You mine for minerals and materials, yes, but not from the stars. It is misinformation since the SSP has Zero Point energy.

AI

Gosia: Someone asks: "Regarding the AI technology that is currently being developed with immense speed, how could we, on top of increasing our individual and collective consciousness, vibration and frequency in larger masses, prevent the dark forces from manipulating the development of AI technologies in a way that could be of great harm to us?"

Swaruu X (Athena): Simple but they will not agree. Collectively stop using those technologies, turn your back on them. Because there is no lengthier answer, there is not much more to say. Simply, and obviously, by not using that technology en masse, the controllers will not be able to apply it against people, but that will not happen because they have already mind-controlled everyone.

MOON PHASES

Gosia: Someone asks: "If the Moon hologram is an emission made from the Moon

itself, how can the Moon phases be explained, as they could be discarded as a consequence of the reflection of the Sun's light, or is it not?" Can they be explained as human science explains it?

Swaruu X (Athena): The hologram is transparent. The Moon phases are real, it is the reflection of the sunlight on the real surface of the Moon. It is only the details that you see that are superimposed on an almost detailless surface.

Yes, it is well explained by human science. Not everything is false, and what is not false they try to discredit with agendas like flat Earth.

Gosia: If the Moon is to stabilize the stars, does the Viera have the same effect?

Swaruu X (Athena): No, Viera is very small, astronomically speaking. It's just a ship and that's all. And, in my opinion, the Moon doesn't have enough mass for that.

STRING THEORY

Gosia: Question from someone: "Is contemporary string theory close to the truth? Yazhi said there are inconsistencies - which ones?"

Swaruu X (Athena): It is not close to reality, because they only look at things from the understanding of their mathematics which is limited, and even within that limited mathematics they use, relativity theory does not fit with quantum mechanics. String theory is yet another attempt to find the unified field theory. It should be taken as a big indicator that both theories are wrong. They have everything backwards. If they take ether and consciousness out of the equation, everything falls out, and they don't include it.

SOLSTICE - MEDITATION

Question: "I did a group meditation on the solstice. Can that be negative?"

Swaruu X (Athena): No, that will depend on each person, whether it is positive or negative. There are strong energies in the solstice, you can take advantage of them, although for me the biggest benefit is psychological, like on New Year's Day.

MEXICO

Question: "There is a lot of military movement in my region. I am from Mexico"

Swaruu X (Athena): Mexico is one of the most monitored zones for us. We don't see anything out of the ordinary, there is always a lot of military movement there, but it depends on where. In the north, there is a lot of movement with the US forces and there is a Chinese contingent there too. But in the mass of Mexico there is always a lot of military because of their supposed fight against drug trafficking.

DAY IN SPACE

Gosia: When you leave Earth to another planet, is it daylight or dark? I mean, is the cosmos light or dark when you are outside the planet?

Swaruu X (Athena): The color depends on the atmosphere and the environment of each planet. In space, everything is dark because there is nothing to reflect the light.

Gosia: And where are you outside the Earth?

Swaruu X (Athena): The Sun is shining and you can see the Earth below, and the stars and other ships. The Sun is white, not yellow.

Gosia: And when the Sun goes away for a while, it's dark, yes?

Swaruu X (Athena): Yes.

URMAH STARSEEDS AFTER EXTRACTION

Gosia: You know, like you said I would most likely change in seven years to whoever I am in immersion if I got extracted? What if you extracted an Urmah starseed in immersion? Or Arcturian? Would they change to who they are in the pod?

Yazhi: No, I seriously doubt they would, as they remain looking mostly human.

Gosia: So why would I transform in seven years? Cause it's Lyrian to Lyrian?

Yazhi: They are simply too far from their original genetic print and they would be in a human body only because of the artificial translator called pod.

Gosia: I thought so too, yes.

HYADES

Gosia: Is Hyades a constellation?

Yazhi: Yes. Aldebaran is part of it.

Gosia: Someone said it's a cluster and that Mari said it's a constellation.

Yazhi: It is considered a star cluster for some, and a constellation for others. Hyades, strictly speaking, is part of the Taurus constellation, as well as M45 Pleiades. It's a cluster in the constellation of Taurus. So it's a question of terminology. Hyades is a constellation for us. Perhaps not for everyone on Earth, as it is part of Taurus.

People must remember they are talking to another civilization with other parameters and Mari cannot be going investigating every little detail if she is writing 3000 words a day.
