

# WHY IS MAGNETIC FIELD WEAKENING? SHOULD WE WORRY? (ATHENA SWARUU)

Published 18 March 2023 by Cosmic Agency, Gosia

Originally in English - second part of 2022

Gosia: As we always say, there is no imminent pole shift or anything of the kind, but someone asked: "Ok, but there IS weakening magnetic field, which is due to the galactic current sheet that has entered our Solar System. This happens every 12,000 or so years." Do you know anything about that?

Swaruu X (Athena): One comment that can start to answer that question. A question to all of your followers: Have you all noticed that everything is coming up on you now!? Everything looks as if it were coinciding now. Everything, from illnesses to economic collapse to agenda 2030, to asteroids.

My point is that it's all artificial to create worry and despair in people. Like the nuclear war fear that was imposed on to the people's minds and lives since the 1950's. The controllers, especially the human ones, love to make the people live in fear and in survival mode, because they are easier to control. So, whenever you see something like that with catastrophic things coming up, take it with a grain of salt. Another is that the Cabal is saying that there is an asteroid that will pass near Earth by December 27th or 28th. And... it's just an Andromedan supply ship for the Viera, and it's scheduled. There is no danger.

So, weakening magnetic fields of Earth and polar shifts... the Earth is a living planet, as all of them are. They are not static. People are misled to think that planets should be stable as a department building. They are not! They have cycles, moods, and all that causes changes in weather and in magnetic fields that in turn affect everything else in them. Any fluctuation of that sort is only part of a cycle and it also has a lot to do with the Earth's interaction with other planets and suns. I assure you that there is nothing wrong with the magnetic field of Earth.

And although polar shifts are something real, a planet needs to go through a very strong event, a catastrophic one. Or at least some external strong influence that can change all the energetic dynamic of an entire planet, and that is no easy thing. Last polar shift occurred when the waters of Tiamat fell to Earth creating a large flood. Not the flood, as there have been many great floods, not only one as you are led to think, mainly by the Bible.

So, what you are looking at is a hyperactive media machine working for the controllers of Earth, the human level mostly, with the intention of making you worry about everything else except what is important and except what really concerns you personally and as a society. There is nothing wrong with the Sun, nothing wrong with the Earth in that manner. Don't worry and place your attention on things that really matter and are of a more practical to you nature.

Gosia: So, just as a last clarification, there is some weakening of the magnetic field but it's nothing to worry about, or there isn't any?

Swaruu X (Athena): It fluctuates all the time. The controllers are only using the current

"low" data to push their fear agenda. It will come up again soon enough. It's like pushing global warming midsummer. Ignoring that in the southern hemisphere they are freezing. So it's all natural rhythms of the Earth. In spite of artificial weather modification.

And, as a clarification, yes there is artificial weather modification. So they can, and do, create effects to push and justify their agendas, like the carbon one. Carbon Dioxide is not a contaminant!

Gosia: Ok, so if it weakens, what is it due to? Natural cycles... but something more specific?

Swaruu X (Athena): 12,000-year cycle, supposedly. According to our data it fluctuates far more often. I have no idea what they use to be able to claim that 12,000 year cycle, but the fluctuations are very common. Far more common! It goes up and down all the time. As I said above, they are due to the natural rhythms of the Earth and its energetic interaction with its neighboring planets and solar systems.

Gosia: Any consequences for the inhabitants at all?

Swaruu X (Athena): Not at all. Or perhaps a few more cosmic radiation and solar wind particles. But, as we've said before, there is nothing to fear from the sun either.

Gosia: I guess my question would be to go further, what causes natural rhythms of the Earth...but then we can go back all the way to Source and why it wants things it does!

Swaruu X (Athena): In the case of a planet, we would have to go into astrophysics and mathematics, as well as into gravity field modulation.
